

Power BI – Data Transformation & Data Modelling methods applied

Import the 3 CSV files

- Transform "List of Orders" by Keeping only first 500 rows
Click: List of Orders → Home → Keep Rows → Keep Top Rows and keep 500 as the limit.
- Change Order Date to Date
Select Order Date, then Go to Transform and Click Data Type, then Select Date.
- Change Amount and Target to Fixed Decimal
Select amount and select transform. Change the data type as required. Same applies with the target column.
- Proper Case CustomerName
CustomerName → Transform → Format → Capitalize Each Word
- Create Location
merge State + City into Location in City, State format.
Select: City → Ctrl + click → State
Transform → Merge Columns
- Create Profit Margin
Go to: Add Column → Custom Column
- Create Profit Status

Go to: Add Column → Conditional Column
- Merge List of Orders and Order Details into one table

Select: List of Orders

Home → Merge Queries → Merge Queries as New

Select: List of Orders as the first table and Order Details as the second table. Click Order ID in both tables.

Join type: Left Outer and Click OK, then rename the resulting query as Orders Data
- Missing and duplicate values.

For missing values required filters could be used and check for the empty/null values.

For duplicate: Home → Remove Rows → Remove Duplicates

- Sort Order Date

Select Order Date and click the dropdown arrow. Select Sort Descending.

- Filter State

Click the filter arrow and search for: Tamil Nadu

- Duplicate Order Details for Aggregation

Order Details → Duplicate and select the group by function.
